

30TH EDITION

ATTO
Resource Guide
The Power Behind the Storage

ATTO

ATTO Technology, Inc.

Corporate Overview

For nearly 30 years, ATTO has been an innovator in storage and network connectivity, from developing the first solid-state storage device to the latest data center appliances. ATTO develops high-performance products that manage latency in the most demanding real-time environments, resulting in accelerated application performance and enhanced transaction processing. ATTO delivers performance-based solutions to applications, infrastructure, big data, cloud and virtualized environments.

- Enterprise - Database, Web Servers, Back-Office Operations
- Departmental - Business Analytics, Supply Chain, Asset Management
- Workgroup - CAD/CAE, Video Production, Scientific, Energy, Medical

ATTO manufactures the industry's broadest portfolio of high-performance storage and network connectivity products, designed and optimized to work together to help customers better store, manage, analyze and deliver their data.

- Fibre Channel, SAS/SATA, iSCSI, Ethernet, FCoE, Thunderbolt
- HBAs, RAID Adapters, NICs, Storage Controllers, Switches, Thunderbolt™ adapters, Software

ATTO provides tested solutions qualified and certified with industry leading workstation, server, storage and application vendors.

- Faster access to new technology
- Features that improve your workflow
- Maximized solution performance and productivity

A unique level of partnership with customers, solution providers and OEMs

ATTO Founders Dave Snell, CTO, and Tim Klein, CEO

The Power Behind the Storage

"We would like to thank our valued industry partners and loyal customers for your continued support. ATTO's primary mission is to provide the best possible customer experience while offering the highest performing, industry leading products and technologies available."

-Timothy J. Klein, President and CEO, ATTO Technology, Inc.

Host Bus and RAID Adapters

Celerity™ 32Gb/s, 16Gb/s and 8Gb/s Fibre Channel HBAs, ExpressSAS™ 12Gb/s and 6Gb/s SAS/SATA HBAs and RAID adapters provide faster and more efficient data transfers

Network Interface Cards

FastFrame™ 40Gb and 10Gb NICs provide flexible and scalable unified LAN and SAN storage connectivity

ThunderLink™ and ThunderStream™ Devices

ThunderLink™ and ThunderStream™ devices enable high-performance, low latency Thunderbolt™ connectivity to all-in-one systems, laptops, workbooks and mobile workstations for storage and network connectivity

Storage Controllers

ATTO XstreamCORE™ Fibre Channel storage controllers add enterprise Fibre Channel and management features to direct-attached RAID and JBOD enclosures

Bridges

ATTO FibreBridge™ products allow IT administrators to connect SAS HDD, JBOD and Tape devices into storage area networks

Switches

FibreConnect™ 16Gb/s and 8Gb/s Fibre Channel switches provide high-performance, scalable connectivity with enterprise-level features for small to mid-range SANs

Software

ATTO software and downloadable tools help to maximize the productivity of a number of ATTO products

Cables and Accessories

ATTO high-quality cables maximize product performance and data integrity

Technology Leadership

ATTO Product Differentiators

Advanced Data Streaming (ADS™)

ADS latency management technology is built into every ATTO host bus adapter (HBA) and RAID controller, providing the fastest, most consistent time-to-data, delivering the best-in-industry aggregate bandwidth and predictable data transfers for high-performance applications.

ATTO Products with ADS™ Technology

Data transfer performance is smooth and reliable

Competitor's Product

Disrupted transfer with peaks and drops

Transfer rate dips below optimal performance levels

ATTO's heritage of pioneering solid-state storage technology means all products are engineered to manage latency in real-time environments:

- Higher application performance = improved productivity
- Better transaction processing = faster time to revenue and critical business decisions
- Ability to handle larger workloads and client counts

"ATTO is our go-to company for connectivity. We rely on the performance and reliability ATTO products provide and use their products in all of our solutions."

-James McKenna, Vice President, Marketing and Pre Sales, Facilis Technology, Inc.

Adaptive Path Optimization

Intelligently senses multiple paths to drives and increases I/O for up to a 70 percent performance improvement. Also eliminates single points of failure in storage connections

CacheAssure™

Uses supercap technology to protect cached data for up to 10 years. Manages data during power up and power down. Eliminates battery-related maintenance, reducing IT costs

Data Mover

Patented technology that pre-processes data to allow for accelerated movement of data between storage devices while freeing up server CPU, memory and storage interfaces

Drive Map Director™

Provides a logical, static topology and enables login parameters, access management and security for racks of SAS/SATA storage during configuration or maintenance, reducing additional administration costs and resources

DriveAssure™

Repairs drives to prevent premature failures and slowdowns to maximize system uptime. Also ensures 100 percent throughput during data rebuilds

DVRAID™

Technology optimized for digital content creation environments which require protection in the event of a disk failure without the performance penalty traditionally seen with parity RAID

intelligent Controller Architecture™

Combines powerful hardware with an efficient data engine to create a platform that delivers performance with a rapid IO ramp and extremely low latency

Latency Scout™

Enables IT administrators to quickly isolate data center bottlenecks with real-time latency histograms, ensuring maximum infrastructure uptime and optimal performance

MultiPath Director™

A proprietary technology available on ATTO's Fibre Channel host bus adapters and Thunderbolt™ adapters that enables Linux®, Mac® and Windows® workstations and servers to connect directly to enterprise-class storage with redundant controllers, providing failover and load balancing capabilities across multiple paths to the storage

xCORE Acceleration Platform

Features multiple parallel I/O acceleration engines with end-to-end I/O processing, hardware buffer allocation management and real-time performance and latency analytics

eCORE Control Engine

Adds common, open storage services, integrates with industry standard APIs, handles reservations, storage routing and host and LUN mapping functions

Power Center Pro

Easy-to-use, integrated software RAID solution that brings the performance and protection of RAID 0, 1, 1e and 10 to storage devices connected to ATTO host adapters

Virtual Device Manager

Virtualizes devices in one protocol so they can be managed by a controller of a different protocol

WriteStop™

Ensures data security in digital forensics applications by blocking writes to hard disks, while providing read-only protection at the system level

Adaptive Path Optimization

Performance Plus Protection

ATTO's Adaptive Path Optimization has built-in intelligence to sense when multiple paths to drives are available and directs I/O accordingly. For the cost of a cable, you can see up to a 70 percent performance improvement. The ExpressSAS RAID adapter automatically configures and reconfigures for optimum I/O balance and is scalable to work with cascaded arrays and expanders.

Maximum Availability

Up to two-thirds of storage failures are caused by interconnect issues. Adaptive Path Optimization eliminates single points of failure in storage connections by creating redundant data paths. Fast, dynamic rebalancing minimizes disruptions and quickly restores a balanced configuration that delivers predictable access to data.

ATTO Products with Adaptive Path Optimization Technology - ExpressSAS SAS/SATA RAID Adapters and ThunderStream and ThunderLink Thunderbolt™ Devices

CacheAssure™

No Batteries, Lifetime Backup

Power and system failures can cause data located in cache memory to become permanently lost. Traditionally, battery backup units (BBUs), which typically last one to two years, have been used to protect and recover cached data but they require constant monitoring, maintenance and replacement and only protect data for up to 72 hours after a failure. ATTO's RAID products with CacheAssure technology deliver a long-lasting and reliable cached data protection solution all without the worries associated with battery-based technology.

Zero Maintenance Data Protection

CacheAssure saves time and money by eliminating the need to install, monitor, maintain, dispose of and replace batteries. It provides protection within a few minutes of installation while batteries can take six to eight hours to recharge, which can put data at risk. Contents in cache memory get saved immediately in the event of a system failure or power loss and can remain protected for up to 10 years. Unlike other solutions that transfer data immediately upon power restoration, CacheAssure ensures storage is back online before restoring and synchronizing data.

ATTO Products with CacheAssure Technology - ExpressSAS SAS/SATA RAID Adapters

"Extremely satisfied... we're noticing astronomical speed in transfer rates."

-Zoltan Kiraly, Senior SAN/Solutions Architect, Mercedes-Benz

DriveAssure™

Extend the Life of Your Drives

Studies show that up to 60 percent of IT budgets are spent on maintenance. DriveAssure searches for bad sectors or slow spots and repairs them without failing the drive, preventing the loss of critical assets and ensuring drives run longer, smoother and faster. Drives are groomed to effectively extend their useful life, reducing maintenance costs.

Maximize System Uptime

Fast access to, and rapid delivery of, data is critical in today's virtualized and big data environments. DriveAssure compensates for a slow drive in a RAID group to keep data moving smoothly within a guaranteed response time. In the event of a drive failure, the RAID group is rebuilt up to 50 percent faster than competitive solutions, all while providing 100 percent data delivery performance to the client.

ATTO Products with DriveAssure Technology - ExpressSAS SAS/SATA RAID Adapters and ThunderStream adapters

MultiPath Director™

Enhancing High Performance Applications

Workstation-based applications in high-performance workgroup environments require fast throughput and uninterrupted access to data. In a typical workgroup setup, a server links workstations to storage with data residing on shared resources in a storage area network, or SAN — a configuration that adds latency, increases complexity and generally does not support the high performance level required by today's data-intensive workstation applications, like seismic exploration, scientific research, CAD/CAE, medical imaging and media production. The only other alternative is to use direct-attached storage for each workstation, an option that creates islands of unprotected data and makes it difficult to share projects.

Superior Performance

MultiPath Director solves performance problems by offering the unique option to bypass servers and connect Windows®, Linux® and Mac® workstations directly to enterprise-class storage, providing a completely redundant, high-availability, high-performance storage solution for workstation applications. Redundant data paths with failover protection automatically route data to a secondary path in the event of a primary link, cable or switch failure, guaranteeing uninterrupted access for mission-critical applications. Load-balancing features use multiple paths to optimize data transfers, effectively eliminating bottlenecks that can drag down application performance. Load balancing and failover protection do not exist in most workstation operating systems. By incorporating these features at the driver level, ATTO provides the only solution that allows Windows, Linux, and Mac workstations to work together in a heterogeneous SAN.

ATTO Products with MultiPath Director Technology - Celerity Fibre Channel HBAs and ThunderLink adapters

32Gb, 16Gb and 8Gb Fibre Channel HBAs

Celerity™ Host Bus Adapters

Celerity Fibre Channel HBAs are designed to cover the full performance spectrum from enterprise to workgroup and server to workstation environments. This highly integrated, fully scalable family of adapters is engineered to optimize data transfer using a combination of features that enhance the data delivery process and is fully scalable. ATTO's Celerity 32Gb Gen 6 single- and dual-channel HBAs further enhance speed and reliability in high-bandwidth work environments. Celerity 16Gb Gen 6 single-, dual- and quad-channel cards address the need for high-performing, scalable and secure storage to support exponential data growth from applications. With features including Forward Error Correction, the Gen 6 portfolio ensures high reliability in demanding, high-speed networks. Built with the PCIe 3.0 computer interface, Gen 6 host adapters are compatible with all Fibre Channel 32, 16 and 8Gb devices.

- Optimized for extremely low latency and high-bandwidth transfers
- Engineered to meet today's high-performance applications, PCIe 3.0 servers and SSD demands with up to 1.6 million IOPS on a single port
- Designed to support real-time virtual environments resulting in higher application performance, better transaction processing and the ability to handle larger workloads
- Enterprise storage-ready compatible with Dell®, EMC®, HP®, Hitachi Data Systems, IBM®, NetApp®, Quantum® and other major storage vendors
- MultiPath Director™ is the industry's only solution to allow servers and workstations access to high-availability, high-performance, enterprise-class storage for shared workflows
- MultiPath Director implemented across all clients (servers and workstations) improves overall efficiency of the Fibre Channel SAN infrastructure
- Low power consumption expands system performance resources to extend processing capabilities
- Complete SAN connectivity solution when combined with an ATTO FibreConnect™ Fibre Channel switch

FC-322E

Supports:

- Linux®, Mac®, Windows®, Windows Server Hyper-V®, VMware®, FreeBSD (32Gb and 16Gb only), illumos (32Gb and 16Gb only)
- Direct fabric/switch attach and point-to-point
- Certified with industry leading platforms and applications
- N-Port ID Virtualization and Virtual Fabric

Includes:

- Advanced Data Streaming (ADS™) technology
- Pluggable optical SFP+
- ATTO Config™ Tool for customized performance settings

Complementary Products:

- ATTO XstreamCORE™ Storage Controllers
- ATTO FibreBridge™ Fibre Channel Storage Controllers
- ATTO FibreConnect™ Fibre Channel Switches
- ATTO ThunderLink™ Devices
- ATTO premium cables

"ATTO is an industry leader and long-standing technology partner of Infotrend. Their innovative 16Gb Fibre Channel connectivity products offer seamless compatibility and maximum performance with our EonStor DS 3000 and DS 4000 Storage Systems and prove to be essential for data-intensive, low-latency applications covering enterprise to data center environments."

-Thomas Kao, Senior Director of Product Planning, Infotrend

Compatible software available - see page 24.

Compatible cables & accessories available - see page 26.

12Gb and 6Gb SAS/SATA HBAs

ExpressSAS™ Host Bus Adapters

ExpressSAS host bus adapters leverage the performance and scalability enhancements of Serial Attached SCSI (SAS) technology to deliver the fastest available connection to SAS/SATA storage. They offer a reliable direct-attached storage connectivity solution that is interoperable with a wide range of internal and external disk and tape products. ExpressSAS 12Gb SAS/SATA HBAs feature PCI Express 3.0 bus technology in a low-profile form factor and offer the latest miniSAS HD connectors for improved cable management and monitoring.

- Optimized for extremely low latency and high-bandwidth transfers for both data-intensive and high-transaction rate applications
- Compatible with all major SAS/SATA solid-state disk, hard disk and tape drives
- Uses up to 40 percent less power than competitive HBAs, reducing overall power and cooling costs
- Low power consumption expands system performance resources and extends processing capabilities

Supports:

- Mac® (6Gb only), Windows®, Linux®, VMware®, FreeBSD® (12Gb only), illumos (12Gb only)
- Power Center Pro RAID 0, 1, 10, 1e (12Gb Only)
- Up to 2048 end point devices
- Certified with industry leading platforms and applications

Includes:

- Advanced Data Streaming (ADS™) technology
- ATTO ConfigTool™ for customized performance settings
- WriteStop™ technology for data security in digital forensic applications

Complementary Products:

- ATTO ThunderLink™ Devices
- ATTO premium cables

"Working together, ATTO and HGST have completed compatibility testing on the latest 12Gb/s SAS HBAs and SSDs to ensure that enterprise customers are able to take advantage of the performance in this latest leap forward in storage connectivity."

-Chet Mercado, Technical Marketing Engineer, HGST

6Gb SAS/SATA RAID Adapters

ExpressSAS™ RAID Adapters

ExpressSAS 6Gb/s SAS/SATA RAID adapters provide high-performance data protection to direct-attached SAS and SATA JBOD storage. With a wide variety of port configurations and RAID levels, these cards offer flexibility for the most diverse range of applications. For nearly 30 years, ATTO's time-tested RAID technology has provided "no compromise" solutions with the highest performance and data integrity.

- Optimized for extremely low latency and high-bandwidth transfers for both data-intensive and high-transaction rate applications
- 100 percent performance, even during rebuilds
- Rebuilds RAID groups up to 50 percent faster than competitive solutions
- Uses up to 70 percent less power than competitive adapters, reducing overall power and cooling costs
- DriveAssure™ improves system uptime because drives run longer, smoother and faster; drives are groomed to effectively extend their useful life, maximizing investment value
- CacheAssure™ securely protects data in non-volatile memory during a power interruption and ensures that storage is online and stable before restoring and synchronizing data

Supports:

- Mac®, Windows® and Linux®
- RAID levels 0, 1, 4, 5, 6, 10, 40, 50, 60, JBOD and DVRAID™
- Certified with industry leading platforms and applications

Includes:

- Advanced Data Streaming (ADS™) technology
- DriveAssure™ technology
- CacheAssure™ technology (optional)
- Adaptive Path Optimization
- ATTO ConfigTool™ for customized performance settings

Complementary Products:

- ATTO ThunderLink™ Devices
- CacheAssure™ Technology
- ATTO premium cables

"Data storage and management is a huge part of our business ... we choose ATTO products because they have a history of providing the best tools available and give us the confidence that our data is stored both safely and securely."

-Chris Peariso, Chief Technical Officer, LightIron

40Gb and 10Gb Ethernet Optical and 10GBASE-T NICs

FastFrame™ Network and Storage Interface Cards

The ATTO family of 10/40GbE network and storage interface cards is available in single-, dual- and quad-port (10GbE only) configurations and can be used anywhere in your infrastructure, including workstations, storage, servers and data center racked servers. Mac®, Windows®, VMware®, FreeBSD and Linux® driver support ensures that FastFrame cards are suitable for applications ranging from M&E post-production environments to NAS installations serving medical imaging, big data analytics environments, high-performance computing clusters (HPCs) and more.

As a pioneer in iSCSI, ATTO designed its FastFrame family for the rigorous data transfer and reliability standards required for storage interconnect. The flexibility of the FastFrame product line extends from both support for 10- and 40GbE optical options (SFP+ for 10GbE, QSFP+ for 40GbE), to connectivity options including Direct Attach Copper (DAC) and 10GBASE-T. Optical cards also feature DAC support*, while 10GBASE-T cards work with standard low-cost Cat6a cabling. ATTO's 10GbE quad-port NIC also provides more VMs per PCIe bus than dual- or single-port competitive products.

- FastFrame leverages ATTO's exclusive Advanced Data Streaming (ADS™) technology to provide high-bandwidth and managed latency for high-performance, enterprise-level iSCSI storage as well as standard 10GbE network infrastructures
- ATTO's 40GbE NICs provide RDMA/RoCE support with best-in-class 1us MPI ping latency for HPC and HFT environments
- FastFrame cards support Energy Efficient Ethernet and are up to 30 percent more efficient in their power consumption, drastically reducing data center operating costs

Supports:

- Mac OS® X, Windows®, Linux®, FreeBSD and VMware®
- Data Center Bridging Ethernet
- RDMA/RoCE Support
- iSER
- iSCSI initiators
- Certified with industry leading platforms and applications

Includes:

- Advanced Data Streaming (ADS™) technology
- Pluggable optical SFP+/QSFP+ (NS and NQ Models Only)

Complementary Products:

- ATTO ThunderLink™ Devices
- ATTO premium cables

*DAC support available only on NS11 and NS12 models

"Including ATTO as the storage connectivity and networking interfaces in our solution is an easy choice for us. Combining proven performance and stability of their 10GbE NICs and RAID adapters with our solutions provides our customers with an ideal high-performance and reliable method of digital asset management."

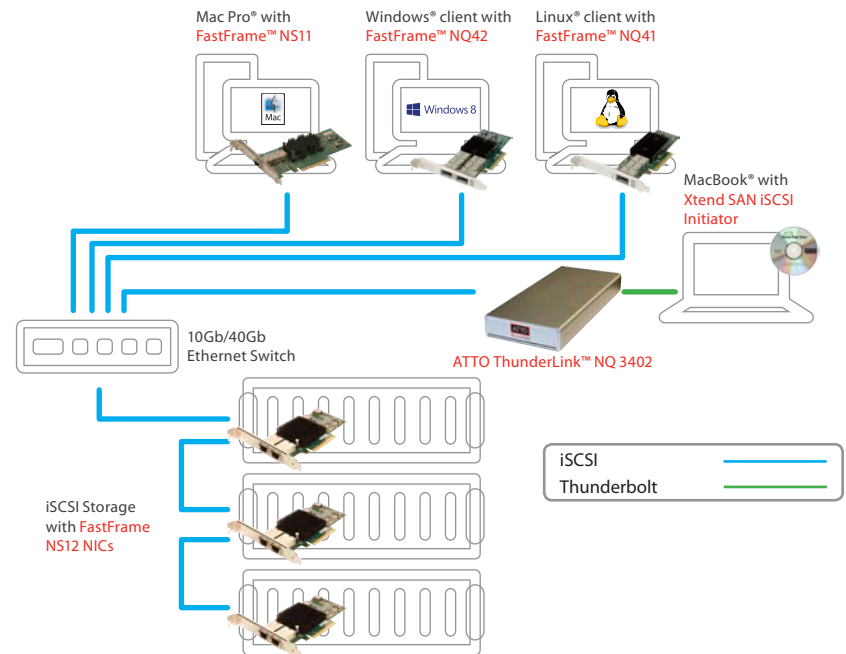

-Tim Jones, President and CTO, TOLIS Group

Use Case iSCSI SAN Configuration

ATTO develops high-performance products that manage latency in the most demanding, real-time environments resulting in accelerated application performance, enhanced transaction processing and the ability to handle large workloads and client counts.

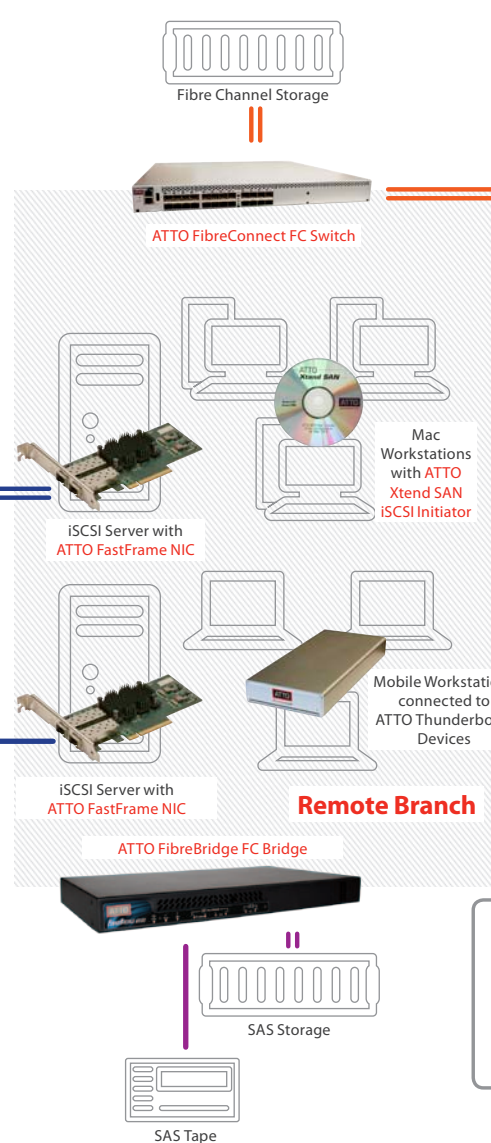

Enterprise - IOPS

Database | ERP | Web Servers | Email Servers | Back-Office Operations

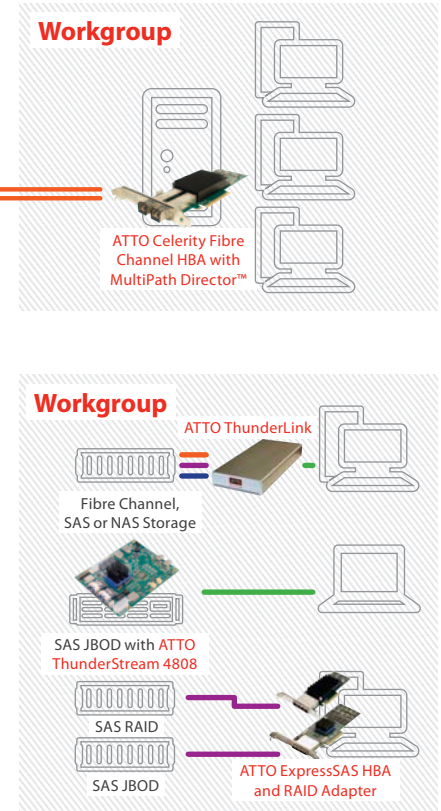

Departmental - Mixed Environment

Business Analytics | Financial/OLTP
Supply Chain | Asset Management | Operations

Workgroup - MB/sec

CAD/CAE | Video Production/Broadcast
Medical Imaging | Seismic/Oil & Gas

ATTO components are designed to work seamlessly together to deliver maximum performance for bandwidth-intensive environments from application-specific workgroups to large-scale enterprise infrastructures. ATTO delivers the most extensive portfolio of high-performance storage and network connectivity products that are certified for interoperability with industry leading server, tape and disk storage, and workstation, server and application vendors.

Storage Controllers

XstreamCORE™ Fibre Channel to SAS and Ethernet to SAS Storage Controllers

ATTO XstreamCORE storage controllers enable storage architects to build modular storage solutions with servers running software defined storage software and JBOD, JBOF or RAID storage. Optimized to take advantage of flash capabilities, XstreamCORE enables sharing of storage while adding less than four microseconds of latency. Engineered with an open design, XstreamCORE storage controllers are storage-independent devices that provide a common set of services and features to storage and offload functions from server CPU, memory, networks and storage fabrics enabling a wide range of use cases while reducing resource utilization and increasing overall performance.

- xCORE Data Acceleration technology, featuring multiple parallel I/O acceleration engines with end-to-end I/O processing, hardware buffer allocation management, deterministic latency and real-time performance and latency analytics. Users will benefit from very high, reliable throughput and IOPS while adding less than four microseconds of latency
- eCORE Control Engine adds common, open storage services, integrates with industry standard APIs, handles reservations, storage routing and host and LUN mapping functions. eCORE also manages traffic for data mover offload functions with error handling and diagnostic tools, adding value to any storage infrastructure while tightly integrating with any server-based software
- XstreamVIEW™ System Manager, the XstreamCORE user interface, allows administrators to remotely manage, set up and configure the storage controller while providing storage performance metrics, data mover traffic statistics, storage and host LUN mapping and diagnostic tools

Supports:

- Full-duplex data transfers
- Error recovery
- Certified with industry leading platforms and applications
- Data Mover functionality
- VMware® ready (VAAI)

Includes:

- XstreamVIEW™ web-based GUI simplifies management, monitoring and diagnostics
- xCORE Data Acceleration
- eCORE Control Engine
- Parallel Data Processing
- Pluggable optical SFP+/QSFP+ modules

Complementary Products:

- ATTO Celerity™ Fibre Channel HBAs
- ATTO FibreConnect™ switches
- ATTO FastFrame™ NICs

XstreamCORE 7500

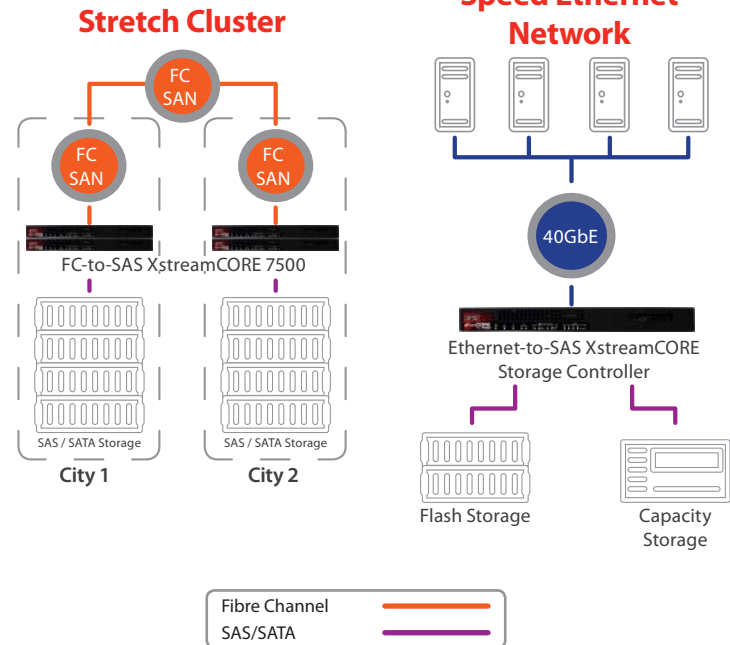

"ATTO's cross-platform support is why we incorporate their solutions in our labs. We have both Windows and Mac products and ATTO provides the driver support we need on both platforms as well as their extensive OS support for all the variations of those platforms."

-Robb Cadzow, Application Engineer, Telestream

Thunderbolt™ Devices

ThunderLink™ and ThunderStream™

ATTO ThunderLink and ThunderStream Devices allow today's Thunderbolt technology enabled platforms to connect into high-performance storage and networks, including SAS, SATA, Fibre Channel and Ethernet infrastructures. ThunderLink and ThunderStream products are focused on applications where performance and latency management are essential. With Thunderbolt connectivity, creative, engineering and scientific professionals now have access to storage and networks at speeds not previously available. ATTO's exclusive Advanced Data Streaming (ADS™) technology provides the fastest, most consistent time-to-data, delivering best-in-industry aggregate bandwidth and predictable data transfers for high-performance applications or mobile platform users.

- Widest portfolio of connectivity for Thunderbolt technology enabled all-in-one systems, workbooks and workstations into high-performance storage and networks
- Makes the ATTO portfolio of solutions, with full features and functionality, available to Thunderbolt technology-enabled platforms in a low-profile desktop form factor
- Daisy-chaining, combined with hot-plug capability, allows addition of devices or reconfiguration of the entire system on-the-fly

ThunderLink

ThunderLink Supports:

- Mac®, Windows®, Linux®
- Certified with industry leading platforms and applications
- DisplayPort (including 4K), hot plug, daisy chain

Includes:

- Advanced Data Streaming (ADS™) technology
- ATTO ConfigTool™ for customized performance settings

Complementary Products:

- ATTO Celerity™ Fibre Channel HBAs
- ATTO ExpressSAS™ HBAs and RAID Adapters
- ATTO FastFrame™ NICs
- ATTO XstreamCORE™ Storage Controllers
- ATTO FibreBridge™ Fibre Channel Bridges
- ATTO FibreConnect™ Fibre Channel Switches
- ATTO premium cables and accessories

ThunderStream Supports:

- Mac® and Windows®
- RAID Levels 0, 1, 5, 6, 10
- DisplayPort (including 4K), hot plug, daisy chain, autonomous operation

Includes:

- Advanced Data Streaming (ADS™) technology
- Adaptive Path Optimization technology
- DriveAssure™ technology
- ATTO ConfigTool™, an easy to use management and monitoring interface
- Automatic drive initialization and verification to identify drives with soft errors or performance issues
- RAID export functionality

"The ATTO Technology 10GbE ThunderLink lets Mac users connect to powerful Seagate storage systems. These products combined create an excellent solution for the Media and Entertainment industry."

-Cooper Cowart, Senior Director Marketing and PLM, Seagate Cloud Systems

Fibre Channel-to-SAS Bridges

FibreBridge™ Fibre Channel to SAS Bridges

The ATTO FibreBridge allows the use of direct attached SAS/SATA disk or tape storage devices in a Fibre Channel SAN environment while providing management and monitoring capabilities not available in direct connect or native technologies. ATTO bridges are engineered to integrate with and are fully compliant with Fibre Channel and SAS specifications to assure easy installation and flawless operation. ATTO offers enterprise-class intelligent bridging products that allow you to keep your infrastructure in place without the need to rip and replace and allow the use of existing technology as the industry changes and new technology as your organizational needs change.

- Compatible with all storage devices including JBODs, hard disk drives, SSD, tape libraries, RAID arrays and RAID controllers
- Includes patent-pending Drive Map Director™, which reduces down time during drive maintenance by keeping the exiting network topology available without having to re-map the LUN structure of the SAN
- Lower solution and operational costs with reduced need for many fibre channel components and low power consumption which reduces overall electric and cooling costs

Supports:

- Full-duplex Fibre Channel data transfers
- Error recovery
- Certified with industry leading platforms and applications
- Data Mover functionality
- VMware® ready (VAAI)

Includes:

- ExpressNAV™ web-based GUI simplifies management, monitoring and diagnostics
- Hardware acceleration
- Parallel Data Processing
- Pluggable optical SFP+ modules
- Dual Power Supplies

Complementary Products:

- ATTO Celerity™ Fibre Channel HBAs
- ATTO FibreConnect switches

Use Case

Adding next generation, low cost storage technology to a SAN

The FibreBridge™ 6500 will allow you to connect newer, faster and higher capacity SAS or SATA drive technology to your existing Fibre Channel SAN. Since SAS/SATA technology does not natively connect to Fibre Channel SANs, a bridge must be used to allow coexistence on the SAN. The FibreBridge 6500 also provides extensive manageability and troubleshooting features not found in direct attached technology.

16Gb and 8Gb Fibre Channel Switches

FibreConnect™ Switches

ATTO FibreConnect Fibre Channel Switches combine high performance with exclusive latency management features for a completely scalable end-to-end SAN connectivity solution. This combination ensures smooth and reliable data transfers on a SAN to keep pace with growing business demands. FibreConnect switches streamline workflow processes and are ideal for streaming media, virtualized environments and backup/recovery applications.

- Designed, built and tested for low latency to ensure smooth and reliable transfers
- Guaranteed uninterrupted bandwidth for time-sensitive applications
- Facilitates collaborative workflows allowing multiple users to share resources, increasing productivity
- Pay-as-you-grow options enable organizations to grow at their own pace in an affordable, flexible and non-disruptive manner
- Simplifies administration with easy implementation and comprehensive management tools
- Maximizes infrastructure uptime with advanced monitoring, management and diagnostic tools
- Fully tested and interoperable SAN solution

Supports:

- 4, 8 and 16Gb/s devices
- Ports-On-Demand scalability (increments of 8 or 12)
- Certified with industry leading platforms and applications

Includes:

- Pluggable optical LC SFP+
- Web Tools interface simplifies configuration and management
- Mounting hardware

Use Case

Improving performance with existing storage

ATTO FibreConnect 16Gb Gen 5 powered switches provide a critical building block for today's highly virtualized data center environments and offer low-cost access to industry-leading storage area network (SAN) technology. FibreConnect is designed to maximize application uptime with "five nines" availability and delivers consistent optimum performance while reducing overall operational expenses. Celerity HBAs and XstreamCORE Fibre Channel storage controllers provide a completely flexible, high-performance and scalable end-to-end virtualized SAN connectivity solution.

Xtend SAN™ and Disk Benchmark

Xtend SAN

Xtend SAN iSCSI Initiator for Mac® software connects workstations with built-in Ethernet to multiple direct-attached storage servers across long distances. It provides users with network access to block-level storage without the cost and complexity of a Fibre Channel SAN. With iSCSI, small businesses and workgroups gain the advantages of a SAN on a manageable budget.

- Easy setup and management features make implementing an iSCSI SAN simple
- High performance for demanding applications
- EMC® E-Lab Certified
- Compatible with 32/64 bit Mac OS® X
- Volume and Enterprise Licensing available

Supports:

- Up to 1024 targets
- Header/Data digest with class 1 error recovery
- SNS client login redirect function
- CHAP iSCSI security
- iSNS client
- Certified with industry leading platforms and applications

Includes:

- Easy-to-use GUI simplifies set-up, configuration and management
- Advanced CLI for addressing iSCSI targets
- Voluming Licensing available

Complementary Products:

- ATTO FastFrame™ NICs
- ATTO ThunderLink™ Devices

Part Number:

- INIT-MAC0-001

ATTO Disk Benchmark

The ATTO Disk Benchmark is the world's most widely used performance measurement tool. Measure your storage system performance with various transfer sizes and test lengths for reads and writes. Several options are available to customize your measurement including a comparison mode to analyze various performance tests. Use ATTO Disk Benchmark to test HDD and SSD drives and to tune for maximum performance.

- Transfer sizes from 512KB to 8MB
- Transfer lengths from 64KB to 2GB
- Support for overlapped I/O
- Supports a variety of queue depths

Management Tools

ConfigTool™, vConfigTool™ and XstreamVIEW™

ConfigTool

ATTO ConfigTool helps customize the settings of your ATTO host bus adapter (HBA) to maximize the performance of your storage connection. Standard on all ATTO HBAs and Thunderbolt™ Devices, ATTO ConfigTool is available for Mac®, Windows® and Linux® operating systems. While the factory settings on your host adapter provide excellent performance for a wide range of applications, some specialized applications may benefit from adjustment of the adapter settings to tune for a specific performance range.

- Custom utility settings to optimize performance
- Available on Mac, Windows and Linux
- Advanced troubleshooting and monitoring

vConfigTool

ATTO's vConfigTool for VMware vCenter Server is a software plug-in that integrates centralized management and monitoring of Celerity™ and ExpressSAS™ host adapters into VMware virtual environments. This accelerates adapter deployments, optimizes configurations, improves system availability and reduces infrastructure costs. vConfigTool includes Latency Scout, an I/O latency statistic feature that enables IT administrators to quickly make adjustments within the data center to maximize performance. Real-time histograms allow administrators to monitor storage I/O latency and isolate bottlenecks.

- Custom utility settings to optimize performance
- Available for VMware vCenter Server
- Advanced troubleshooting and monitoring

XstreamVIEW

The ATTO XstreamVIEW™ System Manager user interface allows administrators to remotely manage, set up and configure the storage controller while providing storage performance metrics, data mover traffic statistics, storage and host LUN mapping and diagnostic tools. XstreamCORE Fibre Channel Storage Controllers equipped with XstreamVIEW help manage complete storage infrastructures via a single user interface.

- Advanced performance tuning
- Email notification for monitoring
- Event logging

ATTO Cables and Accessories

Premium Connectivity Components

For nearly 30 years, ATTO has conducted in-depth testing on the effects of noise, interference and cable lengths on connectivity solutions. ATTO premium cables are specifically designed to optimize connections between high-performance storage, servers and workstations and are recommended for use with all ATTO products to ensure the highest levels of performance and data reliability.

Utilizing high-quality shielding, equipment-specific cable lengths and extensive pull testing to verify connection integrity, these premium cables ensure the best performance and data integrity from your ATTO-enabled infrastructure.

SAS Cable, External SFF-8088 to SFF-8088

Pure Signal Integrity

ATTO Technology has been manufacturing storage connectivity products for nearly 30 years, becoming experts in the art of developing clean board design for smooth data streaming. ATTO engineers focus on signal integrity, designing to minimize jitter, crosstalk, reflections and power supply noise, resulting in the cleanest signals in the industry.

This is one of the reasons why ATTO is the most trusted storage connectivity solution provider for high speed streaming applications. Signal quality is the best indicator of performance and could be the difference between completing projects on time, missing deadlines, or losing critical data. ATTO products can be relied upon for uninterrupted, reliable and high-performance data transfers.

ATTO Cable Signal:
Clean eye pattern = tighter signal strength
Smooth and reliable data transfers

Substandard Cable Signal:
Distorted eye pattern = weaker signal integrity
Possible data loss, errors
